

# FRICKE DOSING SYSTEM

## MANUAL DOSING SYSTEM

### Controlled recipe reliability

The Manual Dosing System (MDS) integrates manual additions into the production process in a controlled manner and incorporates them into the barcode control of the batch management system to ensure reproducibility.

All manual dosing operations are clearly assigned, documented and can be flexibly carried out using up to two scales per workstation.

### Advantages

- **Controlled & reproducible:** barcode-guided integration of manual dosing into the production process
- **Flexible & expandable:** integration of up to two scales per workstation possible
- **Mobile:** flexible use with trolley
- **Documented & safe:** recording of all manual additions in the batch management system
