

FRICKE FILLING SYSTEM

AFS 22

Automated filling for maximum efficiency

The AFS 22 is a fully automatic below-level filling system designed for the precise filling of foaming or explosive liquids.

Thanks to its modular design, the AFS 22 can be easily expanded and combined with automated systems such as capping, labeling, or conveying - making it ideal for small to medium-sized filling operations.

Products: cleaning agents and solvents, chemical liquids, mineral oils, glazes

Containers: canisters

Below-level filling: for foaming or explosive liquids - filling below the level

Weight ranges: 2.5 kg - 40 kg

Advantages

- **Precise & clean:** automatic below-level filling with a throughput of up to 320 canisters per hour (10 kg containers) using two filling stations
- **Fast & flexible:** quick changeover for different containers and products, integrated automatic capper for continuous processes
- **Expandable:** integration of capping, labeling, and conveying systems for maximum efficiency

Options: dust cap remover, labeling, two-station filler

explosion protection in acc. with ATEX Directive 2014/34/EU
