

FRICKE FILLING SYSTEM

FFS 31

High performance meets maximum safety

The FFS 31 is a filling system designed for precise below-bunghole filling of non-foaming liquids. Filling takes place beneath the bung opening, reliably preventing any contamination of the filling valve.

Multiple containers can be filled directly on the pallet - safely, cleanly, and without heavy lifting.

Products:	flavors, dispersions, oils
Containers:	canisters and drums directly on the pallet, IBCs
Below-bunghole filling:	for non-foaming liquids - filling below the bunghole
Weight ranges:	10 - 600 kg, 20 - 1,500 kg, 50 - 3,000 kg. With additional scale 0.5 - 30 kg, 1 - 60 kg

Advantages

- **Clean & precise:** calibratable below-bunghole filling with automatic coarse-to-fine flow switching - no dripping
- **Ergonomic:** intuitive one-hand operation, pallet-level filling without heavy lifting
- **Flexible:** quick changeovers for different products and container sizes
- **Fast:** high IBC throughput with two weighing systems

Options:	conveyor technology, cap screwing device
	exhaust system for emission reduction
	explosion protection in acc. with ATEX Directive 2014/34/EU
