

FRICKE FILLING VALVE

FVS 10 / FVS 11

Above-level filling valve

The FVS 10 and FVS 11 filling valves are the ideal solution for non-critical, non-foaming liquids in open containers.

They enable precise, splash-free filling and reliably handle products ranging from low-viscosity to pasty liquids.

Available in two different sizes, the valves are manufactured from high-quality stainless steel and offer exceptional durability and process reliability. The three-part, product-contact area allows for efficient cleaning.

Advantages

- **Precise & clean:** splash-free above-level filling without dripping
- **Easy to clean:** only three product-contact parts for fast cleaning
- **Versatile:** suitable for low-viscosity to pasty liquids
- **Process-reliable:** robust stainless-steel valve, high filling accuracy, long service life
- **Quick-change design:** fast disconnection from the two-stage valve opening cylinder (coarse/fine flow)

Valve sizes:	FVS 10: DN 10, 15, 20, 25 FVS 11: DN 10, 15, 20, 25, 35, 50
Products:	paints, coatings, dispersions, adhesives, bitumen, and other non-foaming liquids
Containers:	all types of open containers

Above-level filling:	for non-foaming liquids - filling above the level
Options:	CIP connection, customized fittings
